

NOTES:

- 1. OVERHANG of between 0 and H/4 will generally achieve the best lighting designs.
- 2. Wk is the width of that part of the carriageway, which is used for calculation or assessment of road lighting. (Refer AS/NZS 1158.1.1).
- 3. SETBACK is the horizontal distance between the edge of the traffic lane and centreline of the road lighting pole measured normal to the direction of traffic.
- 4. VERTICAL SECTION HEIGHT is only applicable where a detachable outreach arm is used.
